

Personal Portfolio Website PRD

Ahsan Firdaus – Tech Leader & Strategist

1. Product Overview

This project aims to build a professional personal portfolio website for Ahsan Firdaus, designed specifically for hiring managers, recruiters, and technical leadership stakeholders. The website will present Ahsan's experience in technical operations, machine learning, autonomous vehicle data operations, leadership, and enterprise systems in a clean and modern format.

Primary hosting platform will be GitHub Pages using a static frontend architecture (HTML, CSS, JavaScript only). The final output must be lightweight, responsive, and production-ready.

2. Objectives

- Build a professional online presence for hiring managers and recruiters.
- Showcase leadership experience managing 50+ professionals.
- Demonstrate technical capabilities in AI/ML, operations, ERP, and AV data systems.
- Present measurable business impact instead of generic resume-style descriptions.
- Create a portfolio that can scale in the future with additional projects, blogs, and research.

3. Target Audience

Primary Audience:

- Hiring Managers
- HR Recruiters
- Technical Leads
- Product & Operations Managers

Secondary Audience:

- AI/ML recruiters
- Enterprise system recruiters
- Professional collaborators
- Academic/research audiences

4. Personal Branding Positioning

Brand Positioning:

"Tech Leader & Strategist bridging AI operations, technical execution, and business impact."

Core Themes:

- Leadership
- Operational Excellence
- AI & Machine Learning
- Technical Communication
- Enterprise Systems
- Scalability & Process Optimization

5. Website Structure

Homepage / Hero Section

- Full Name
- Professional title
- Short value proposition
- CTA buttons:
 - Download CV
 - Contact Me

About Section

- Professional summary
- Leadership philosophy
- Career highlights

Experience Section

- Timeline-based professional experience
- Impact-focused achievements
- Metrics and measurable outcomes

Projects Section

- AI/ML projects
- Autonomous Vehicle related work
- ERP & enterprise systems
- Research and thesis projects

Education & Certifications

- Master & Bachelor education
- CCNA
- TOEFL
- Bangkit distinction

Skills Section

- Technical Skills
- Leadership Skills
- Tools & Platforms
- Business & Operations

Achievements Section

- Distinction Graduate
- Competition achievements
- Operational accomplishments

Contact Section

- Email
- LinkedIn
- GitHub
- Resume download

6. Content Draft – Hero Section

Headline:

Ahsan Firdaus

Professional Title:

Tech Leader | AI Operations | Machine Learning Enthusiast

Value Proposition:

Results-driven Team Lead with experience managing high-scale AI data operations and cross-functional technical

teams. Specialized in bridging machine learning requirements with operational execution while delivering measurable business impact.

7. Content Draft – About Section

Ahsan Firdaus is a Technical Team Leader with experience in autonomous vehicle data operations, machine learning implementation, and enterprise systems. Currently leading large-scale operational teams for a global AV project, he combines technical understanding with operational leadership to deliver scalable and high-accuracy solutions.

With academic and professional experience spanning AI/ML, ERP systems, cloud-based applications, and technical mentoring, Ahsan focuses on aligning technical execution with business objectives. His background enables him to bridge communication between technical teams, operational stakeholders, and management effectively.

8. Content Draft – Featured Experience

KUPU ID (Sinarmas Group) — Team Lead

- Leading a cross-functional team of 50+ professionals for Xiaomi Autonomous Vehicle project.
- Delivered 7,870 datasets in a single month with 100% final accuracy.
- Improved operational scalability by optimizing annotation and QA workflows.

Dinamika Teknologi Informasi — Junior Technical Consultant

- Customized Microsoft Dynamics 365 LMS modules.
- Automated workflows using JavaScript, FetchXML, and plugins.
- Improved system reliability and business process efficiency.

Encryptix — Machine Learning Intern

- Built fraud detection systems using Random Forest and XGBoost.
- Improved fraud recall from 0.15 to 0.91 using SMOTE and hyperparameter tuning.
- Developed NLP classification systems using TF-IDF and Logistic Regression.

9. Featured Projects

1. Credit Card Fraud Detection

Machine learning project using Random Forest and XGBoost to improve fraud recall significantly through class balancing and tuning techniques.

2. Vehicle Counting Detection

YOLO-based vehicle counting system trained on 1,667 images achieving 90% accuracy.

3. Daily Cloud

Mood tracking application integrating face detection and NLP journaling analysis.

4. Day Healthy Platform

Health-tech ecosystem integrating chatbot, pharmacy, insurance payment, and dashboard systems.

5. Thesis Research

Comparative Analysis of Machine Learning Algorithms for Financial Time-Series Prediction (Bitcoin).

10. Technical Requirements

Frontend:

- HTML5
- CSS3
- Vanilla JavaScript

Hosting:

- GitHub Pages

Performance Requirements:

- Fully responsive
- Mobile-first design
- Fast loading (<3 seconds)
- SEO-friendly structure

Optional Future Features:

- Dark mode
- Multi-language support (English / Indonesian / Mandarin)
- Blog integration
- Interactive dashboard
- Analytics integration

11. UI/UX Direction

Design Style:

- Minimalist
- Corporate modern
- Clean typography
- White space focused

Primary Colors:

- White
- Black
- Gray

Typography:

- Inter / Poppins / system fonts

Animations:

- Subtle fade-in transitions
- Smooth scrolling
- Hover micro-interactions

Profile Photo Guidelines:

- Recommended aspect ratio: 1:1
- Recommended minimum size: 800x800 px
- Use professional background and lighting
- Save image as:
/assets/profile.jpg

12. SEO & Metadata

Recommended SEO Title:

Ahsan Firdaus | Tech Leader & AI Operations Portfolio

Recommended Meta Description:

Technical Team Leader specializing in AI operations, machine learning, autonomous vehicle data systems, and enterprise technical solutions.

13. Codex Development Instructions

The website must be generated as a static deploy-ready project using only HTML, CSS, and JavaScript.

Required Files:

- index.html
- style.css
- script.js
- /assets/profile.jpg
- /assets/cv.pdf

Deployment:

- Compatible with GitHub Pages
- No build step required
- SEO optimized
- Responsive for desktop and mobile
